Assuming you want to extract the first four letters from a list of names in column **B** regardless of the case. You can use the following formula:

=MID(LOWER(B2),1,4)

The formula in the above illustration utilizes the MID function to extract the first four letters of the text in cell **B2** after converting it to lowercase with the LOWER function.

Compared to using UPPER function:

=MID(UPPER(B2),1,4)
