LEN FUNCTION

The LEN function in Excel is used in determining the number of characters within a given text string. This function is beneficial when working with large datasets and can be used in different ways to aid in the organization and analysis of data.

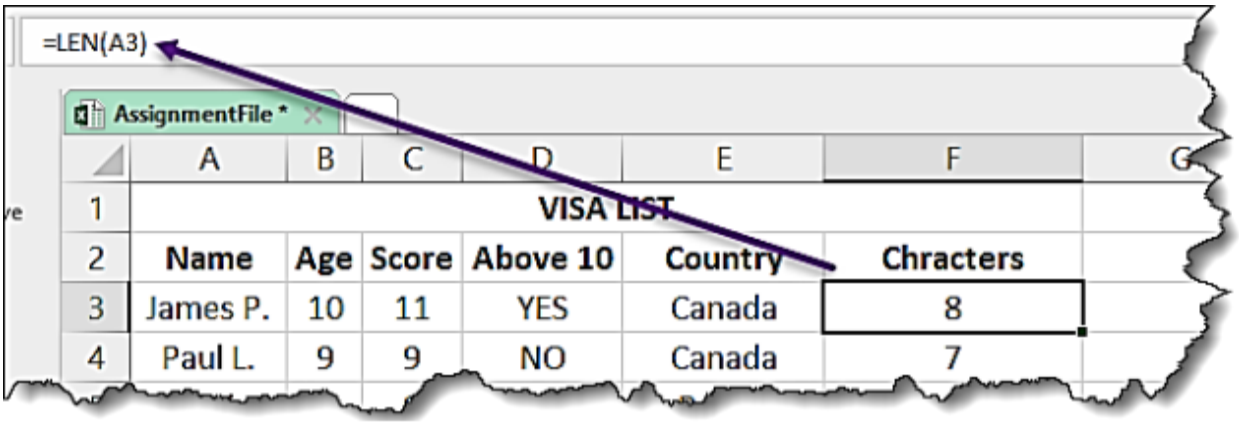

The **syntax** for the LEN function is:

LEN(text)

For example, to use the LEN function, type the formula:

=LEN(**A3**)

The cell **A3** contains the text that you want to measure the length within the parentheses.

The function returns the number of characters and spaces within the text in Cell **A3**. As illustrated above, the number of characters in the word “James P.” is 8, which includes the space between the letter **s** and **P**.

One of the most frequent applications of the **LEN** function is for validating data. This feature can help ensure that the data entered into a
