LOOKUP FUNCTIONS

Lookup functions allow you to search through a column, row, or range of cells and retrieve specific data. They enable you to find a particular value or piece of information within a large dataset and display it in a cell or range of cells.

Lookup functions allow referencing a cell to match values in another row or column, thereby retrieving corresponding results from those rows and columns.

Common Feature of LOOKUP functions includes;

- Ability to locate an accurate or suitable equivalent
- Ability to look for information along the column and row in a worksheet.
- It is easier to use and does not need you to select the whole worksheet.
