

- **F10** is the cell containing the value to look up.
- **A4:C11** is the range that covers the portion on the worksheet used to Lookup value and the return value.
- **3** represents the column counting from the left to the right of the table. In this case, we have the **Score** in the third column.
- **0** or **FALSE** returns the value that will appear if the Score is blank.

As illustrated below, cell **C10** is blank, so the VLookup returns **0** as the score.
