

Other functions, like the **IF** function, can be combined with the VLOOKUP function. With the help of the **IF** and **VLOOKUP function**, it is possible to make comparisons between the VLOOKUP's result and another value.

Take the list in cells **A2:B8** as an example. To determine if the name written in cell **D5** has sales greater than $25,000, the following formula can be used:

=IF((VLOOKUP(D5,A2:B8,2,FALSE)>25000),"Yes", "No")
