Another example of using HLookup in Excel is to look up the score of a Student by providing the student's name.

	A	B	C
1	**Score Sheet**		
2			
3	**Student Name**	**Faculty**	**Score**
4	Adam	Medicine	64
5	Adelin Degroot	Enginnering	24
6	Ben	Education	63
7	Deb	Psychology	53
8	Mckenzy Olds	Law	30
9	Sarah	Law	43
10	Sue	Economics	39
11	Vin	Public Health	53
12			

So, we have a three-column table with the student information. The first column is the student's name, and the third is their scores.

A dashboard is created using cell E9:F11 to input the lookup value and automatically display the result.

The formula used in cell **F11** to display the score is:

=HLOOKUP("Score",A3:C11,F10,FALSE)
