11	Vin	Public Health	53		Score	
12						

So the breakdown of each argument to used with respect to the HLookup syntax is:

- **lookup_value:** this is the value in cell **F9** that the function will look up from the first row of the table
- **table_array:** this is the range of cells **A3:C11** that makes up the table whose top row the function will be searching.
- **row_index_num:** This is the row number to be inputted in cell **F10** from which a matching value should be returned.
- **[range_lookup]:** Although this is optional and boolean criteria (TRUE or FALSE), Which is a logical value you use to specify if you want an approximate or exact match of the Looku_value.

Ben is the student on which the HLookup is focusing.
