Product Name, VLOOKUP would fail to return the corresponding **Product ID** due to the arrangement of the dataset.

- **The range_lookup parameter in the VLOOKUP function is an optional fourth argument.** To obtain an exact match, you will either enter **FALSE** or **0**.

  For that of an approximate match, **TRUE** or **1** is been used.

  Most times, you will want to go for an exact match, but if the fourth argument is not specified, Excel will implement an approximate match, which may lead to wrong outcomes.

  In the example below, the **VLOOKUP Function** is used in cell **G6** to locate the **Product Name** on the sales column in cell **F6**.
