Next, you enter the Match formula, which includes a vertical lookup value cell **I5** for the lookup value input and the lookup-array cell **B2** to **B9** as illustrated below.

The first Match type is set to 0 in this case to perform an exact match. After which you close the Match is closed using parenthesis.

For the final MATCH function, the lookup-value is along the horizontal, which will require a value along row 2 (header). In this case, the dashboard will be used to refer to cell **I6** for the lookup-value**.**
