XLOOKUP FUNCTION (EXCEL 365)

XLOOKUP function is a feature in Excel that allows you to streamline the process of searching for values across multiple columns and rows. This function is so flexible that you can search for values in various data structures, including tables, arrays, and entire sheets. It allows you to search across different columns and rows and returns the result from the same table. You can replace it with the previously utilized VLOOKUP, HLOOKUP, and INDEX/MATCH functions employed for more intricate lookups.

XLOOKUP function goes beyond using it for simple lookups. It can also handle advanced tasks like searching for multiple values in a table, carrying out calculations based on lookup results, searching for values from multiple rows and columns, and performing calculations based on multiple lookups. Its ease of use and ability to quickly perform lookups and calculations make it an indispensable tool for any Excel user.

The Xlookup syntax is as follows:

XLOOKUP(lookup_value,lookup_array,return_array,not_found,match_mode, search_mode)
