DATE FUNCTION

You can use the DATE function in Excel to simplify the process of updating a calendar. This function eliminates the need to adjust a calendar in a worksheet manually. The DATE function is widely used in Excel for date and time operations. The function allows you to create a date value by specifying the year, month, and day to automate calendar updates.

The DATE function syntax is as follows:

=DATE(Year,Month,Day)

For example, the table below shows data from a registration process.

	A	B	C	D	E	F	G
1			Manufactured			Date	
2	Product ID	Product Name	Year	Month	Day		
3	1	Aspire 3	2010	2	12	2/12/2010	
4	2	EliteBook	2012	3	19	3/19/2012	
5	3	IdeaPad	2010	9	20	9/20/2010	
6	4	Inspiron 3567	2012	2	24	2/24/2012	
7	5	iPhone	2013	4	18	4/18/2013	
8	6	MacBook Pro	2013	2	17	2/17/2013	
9	7	Surface Laptop	2018	8	28	8/28/2018	

To change the cell format of the Date, select the cell range, and on the **Home** tab click on the **Format button**, then move down and click on **Format Cells**.
