TIME FUNCTION

You can use the TIME function to create a time value from the hour, minute, and second values, just like you can do the same with the DATE function by obtaining these values from cells.

The TIME Function syntax is as follows;

=TIME(hour,minute,second)

You can capture the values using the TIME function if you have data extracted from another file format.

	A	B	C	D	E	F
1			Manufactured			TIME
2	Product ID	Product Name	Hour	Minute	Second	
3	1	Aspire 3	10	2	3	
4	2	EliteBook	12	3	4	
5	3	IdeaPad	4	9	2	
6	4	Inspiron 3567	2	2	5	
7	5	iPhone	4	4	2	
8	6	MacBook Pro	20	2	0	
9	7	Surface Laptop	20	8	9	
10						

To insert the time into the cells in column **F**, you utilize the TIME function with the formula

=TIME(C3,D3,E3)

Where **C3**, **D3**, and **E3** represent the hour, minutes, and seconds respectively.
