DAY FUNCTION

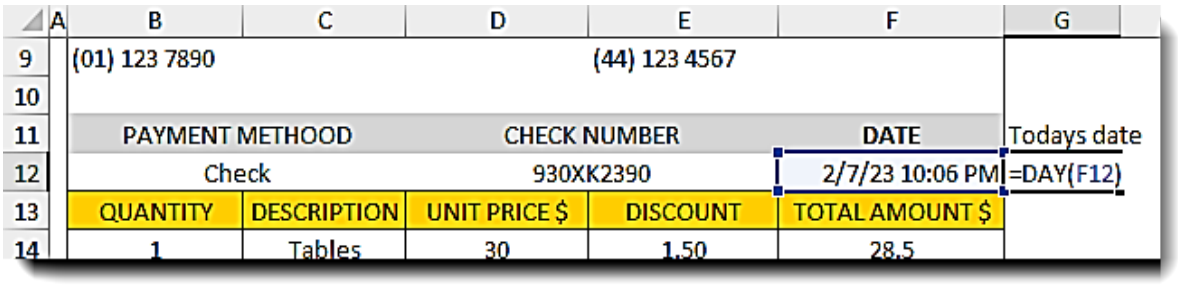

The DAY function in Excel allows you to determine the day of the month from a given date. It requires a date as an argument and returns a number (between 1-31) representing the day.

The DAY function syntax is:

=DAY(Serial_number).

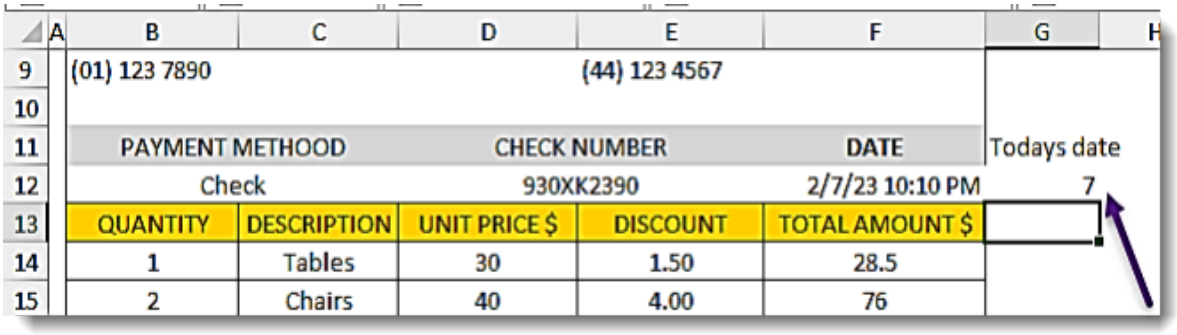

The only argument required is a valid date in the worksheet.

Suppose you have a date in cell **F12** as illustrated below:

	A	B	C	D	E	F	G
9		(01) 123 7890			(44) 123 4567		
10							
11		PAYMENT METHOOD		CHECK NUMBER		DATE	Todays date
12		Check		930XK2390		2/7/23 10:06 PM	=DAY(F12)
13		QUANTITY	DESCRIPTION	UNIT PRICE $	DISCOUNT	TOTAL AMOUNT $	
14		1	Tables	30	1.50	28.5	

If the need arises for you to extract the day into another cell, you can achieve this by using the DAY function, which in this case, returns the value **7** in cell **G12**.

	A	B	C	D	E	F	G	H
9		(01) 123 7890			(44) 123 4567			
10								
11		PAYMENT METHOOD		CHECK NUMBER		DATE	Todays date	
12		Check		930XK2390		2/7/23 10:10 PM	7	
13		QUANTITY	DESCRIPTION	UNIT PRICE $	DISCOUNT	TOTAL AMOUNT $		
14		1	Tables	30	1.50	28.5		
15		2	Chairs	40	4.00	76
