EDATE FUNCTION

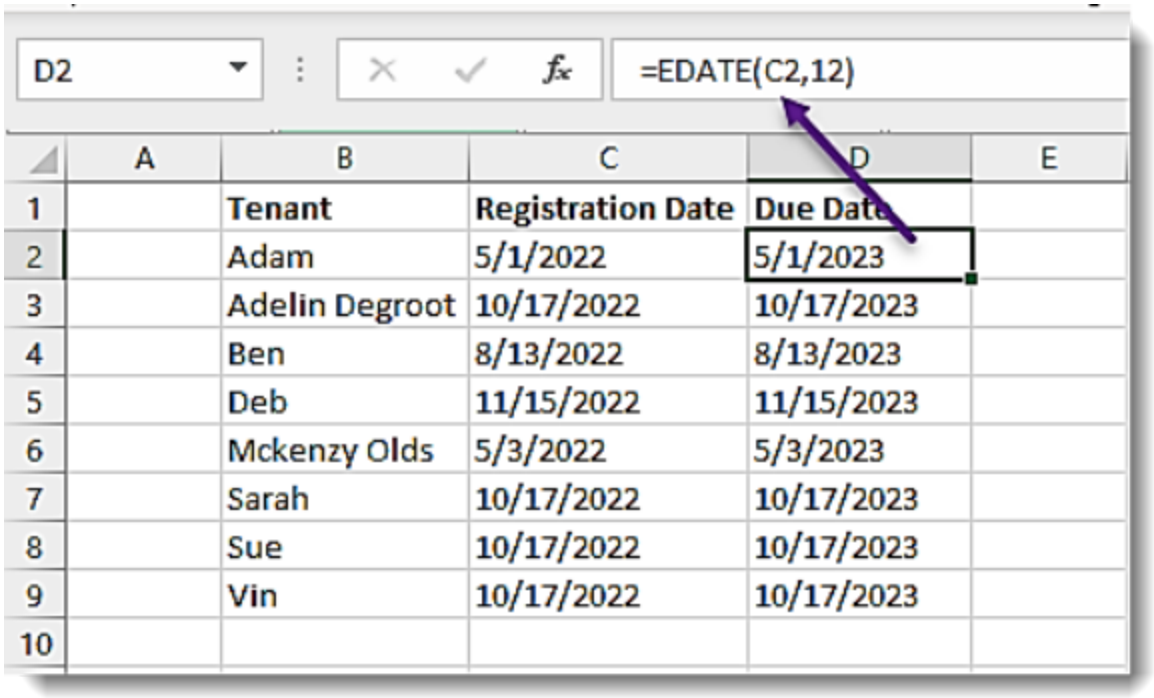

The EDATE function allows you to increase or decrease the amount of a targeted number of months from a specific date.

The EDATE Function syntax is as follows:

=EDATE(start_date, months)

The EDATE function takes two arguments: the **start_date**, which is a date, and the number of **months** to add to the start date, which is an integer. The result it returns is also a date.

For example, in the illustration below, cell **C2** has the date when the tenant paid his rent.

	A	B	C	D	E
1		Tenant	Registration Date	Due Date	
2		Adam	5/1/2022	5/1/2023	
3		Adelin Degroot	10/17/2022	10/17/2023	
4		Ben	8/13/2022	8/13/2023	
5		Deb	11/15/2022	11/15/2023	
6		Mckenzy Olds	5/3/2022	5/3/2023	
7		Sarah	10/17/2022	10/17/2023	
8		Sue	10/17/2022	10/17/2023	
9		Vin	10/17/2022	10/17/2023	
10					

The due date for the next payment is in 12 months, so cell **D2** is used to return the data automatically using the EDATE function as follows:
