beginning of the period, and if the Type value is zero, you will make payments at the end of the period.

Paying at the beginning of the period means you won't need to pay any interest, while if you wait until the end, interest will accumulate on the outstanding balance.

For example, if you want to borrow $75,000 and decide that you will pay that loan off. So you will have the **PV** equal to $75,000 and the **Fv** to be 0 as illustrated below.

	A	B	C	D	E
1					
2			LOAN DETAILS		
4			Rate		
5			Nper		
6			Pv	$ 75,000.00	
7			Fv	0	
8			Type		
9					
10			Payment		
11					

Next, the payments will be met at the start of each period, which makes the Type **1**. The payment is going to be done monthly over the course of **Five** years, which amounts to **60** payments and the rate of interest is 5% per year as illustrated below.
