The result appears in red font because the money is going out from your pocket.

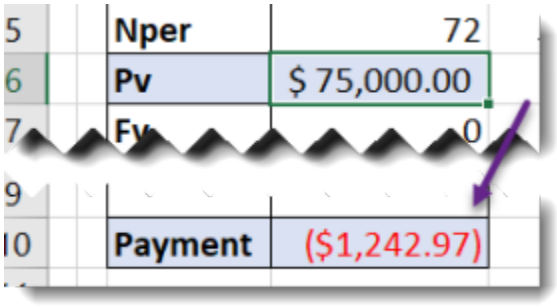

Below is what you will get if you decide to change the **Type** to **0.**

| | C | D |
|---|---|---|
| 2 | **LOAN DETAILS** | |
| 4 | **Rate** | 6% |
| 5 | **Nper** | 60 |
| 6 | **Pv** | $ 75,000.00 |
| 7 | **Fv** | 0 |
| 8 | **Type** | 0 |
| 9 | | |
| 10 | **Payment** | ($1,449.96) |

If the payment is made at the end of the month, there will be a $7.21 difference between $1,442.75 and $1,449.96, representing an increase.

Another thing you can check is the effect of increasing the number of months. So it will now be Six year, which is 72 months.

| | | |
|---|---|---|
| 5 | **Nper** | 72 |
| 6 | **Pv** | $ 75,000.00 |
| 7 | **Fv** | 0 |
| 9 | | |
| 10 | **Payment** | ($1,242.97) |

By utilizing the PMT function in Excel, it is straightforward to adjust each argument and determine the outcomes of how much is needed to pay for the
