or **0.05**). The compounding period should be divided by **12**, since it occurs monthly. Additionally, the total number of payment periods should be divided by the compounding periods per year and entered as negative values for monthly payments.

So in cell **D9**, you have the formula entered as:

=FV(D5/D7,D6*D7,0,-D4)

The result gotten as the Future value is **$123,551.32** as illustrated below:
