

	C	D	F	G
2	NPV Function			
4	Period (Years)	Cash Flow	Annual Interest Rate	5%
5	year 1	-$350,000.00	Net Present Value	
6	year 2	$ 60,000.00		
7	year 3	$ 35,000.00		
8	year 4	$ 25,000.00		
9	year 5	$ 40,000.00		
10	year 6	$ 25,000.00		
11	year 7	$ 22,000.00		
12	year 8	$ 55,000.00		
13	year 9	$ 250,000.00		

The NPV function is calculated in cell C13 as:

	C	D	F	G
2	NPV Function			
4	Period (Years)	Cash Flow	Annual Interest Rate	5%
5	year 1	-$350,000.00	Net Present Value	=NPV(G4,D5:D13)
6	year 2	$ 60,000.00		
7	year 3	$ 35,000.00		
8	year 4	$ 25,000.00		

The formula returns a Net NPV of $35,900.13.
