In cell **D5,** you enter the amount to be paid monthly as your **Payment**. In this case, it will be a negative value because the money is going out of your pocket. So you enter -$1200, and Excel will automatically use an open and close bracket around the value and turn the font red.

	A	B	C	D	E
1					
2			**LOAN CALCULATION**		
4			**Present Value**	**$ 100,000.00**	
5			Payment	($1,200)	

In cell **D6,** you enter the **Number of Periods** as 15, indicating the years to clear the loan. Next, you enter the **Future Value** in cell **D7**.

	A	B	C	D
1				
2			**LOAN CALCULATION**	
4			**Present Value**	**$ 100,000.00**
5			Payment	($1,200)
6			Number of Period	15
7			Future Value	0
8			**Rate**	
9				

However, the **Nper** argument in the formula will require multiplying the **Number of Periods** by 12 months. That will be entered as **D6 * 12**

Cell **D8** will be used to calculate the **Rate** using the formula:
