=RATE(D6*12, D5, D4,D7) and press **Enter**.

	A	B	C	D	E
1					
2			LOAN CALCULATION		
4			**Present Value**	**$ 100,000.00**	
5			Payment	($1,200)	
6			Number of Period	15	
7			Future Value	0	
8			**Rate**	**=RATE(D6*12, D5, D4,D7)**	
9					

The result for the Rate is 1%

	A	B	C	D
1				
2			LOAN CALCULATION	
4			**Present Value**	**$ 100,000.00**
5			Payment	($1,200)
6			Number of Period	15
7			Future Value	0
8			**Rate**	**1%**

When using the **RATE Function** for an investment, the Present Value is negative. So if the investment you did is $100,000, in Excel, it will be entered into cell **D4** as -$100,000.

Investment does not come with monthly payments, so what will appear in cell **D5** is 0.
