The **Number of Periods** is required and is up to you to decide and enter the value. In this example, we use 15.

The **Future Value** is what you want to have by the end of the value you choose for the **Number of Periods.** In this example, we use $1,000,000.

The formula is:

=RATE(D6,D5,D4,D7)

The result is **16.6%**
