EXCEL KEYBOARD SHORTCUTS

Learning how to use shortcut keys is one of the best ways to get better at using the Excel application. You can use many keyboard shortcuts in Microsoft Excel to help you get things done faster and save time as you work.

For example, to open an Excel file, you press **Ctrl** + **O**. This means you press and hold the **Ctrl** key on your keyboard, then tap on the **O** key once.

Other keys include the function, Tab, Alt, Shift, Arrow, and Space keys.

You can also combine your keyboard keys and mouse buttons to create a shortcut.

- A plus (+) means you click and hold

- A comma (**,**) is mainly used after a plus (+). This means you must remove your hands from holding the previous key before using the following key.
