RESIZING AND POSITIONING SHAPES AND IMAGES

To change the size or location of shapes or images inserted in an Excel worksheet, select the object you want to adjust, and immediately, the sizing handle will appear. Click on any of the white circles (sizing handles) to adjust the size of the shape or image by dragging it in or out of the object's center.

You can also **right-click** on the object or shape and select "Format Shape" to access more advanced features, like rotating, flipping, or modifying the aspect ratio.
