ADDING BORDER TO SHAPES

Adding a border to a shape inserted in Excel is like adding a frame to a work of art. A border can highlight the vital information in your spreadsheet and make it stand out.

First, select the shape to which you want to add a border and right-click. From the contextual menu, select **“Format Shape”**.

Then, head over to the "**Format Shape**" tab; you will find a drop-down menu labeled "**Shape Options**."
