CHART STYLES AND FILTER

Excel also has many different chart styles you can choose from to customize the look of your chart. The **Chart Style** can be accessed when you click on an existing Chart on your worksheet. The Chart Design tab on the ribbon is where you click on to view the Chart Sytle in the Style Group.

You can change colors, fonts, and shapes to make your chart look presentable.

However, you have to be careful not to go overboard with all these chart elements.

If you use too many of the chart elements, your chart can look cluttered and confusing.
