CENTER TO PAGE

Centering on page in the Excel Page Setup dialog box is used to align the data in the middle of the page both vertically and horizontally so that there is an equal amount of space on the top, bottom, left, and right sides.

Select the "**Vertically**" and/ or "**Horizontally**" checkboxes in the Page Setup dialog box to do this. Once you check these boxes and apply the changes, your data will be centered on the page within the margins.
