HEADERS AND FOOTER TAB

Headers and footers in Excel are essential features that allow you to add text, images, and other elements to the top and bottom of every page you print.

You can also customize these elements to provide additional information, such as page numbers, titles, and company logos.

After setting your **Print Area**, the header or footer can be created by accessing the **Page Setup dialog** box from the **Print Preview** interface. Then you click the **Page Setup** link in the lower left corner.
