- **Row and column headings** - Row and column headings are the labels that appear above each column and to the left of each row in your spreadsheet. These labels facilitate data organization and navigation within the spreadsheet. You can also repeat the headings on each page if your spreadsheet spans multiple pages.
- **Comments** - Choose the placement of the annotations you added to worksheet cells in the printout by selecting a location within the box. To print annotations in their original position on the worksheet, select "**As displayed on sheet”**.

If you intend to print all annotations together on a separate page after the printout, select "**At end of sheet**." By default, annotations are not added in the printout because "**None**" is selected.

- **Cell errors as** - You can choose how to display cell errors that show up on the worksheet in the printout using the options available in this box. The default setting displays errors as they are, but you can't show them as <blank>,—or #N/A.
