REFRESHING A PIVOT TABLE

To update a pivot table with the latest data from its source, you need to **refresh** it. It's important to refresh the pivot table whenever there's a change in the source data to ensure that it reflects the new information accurately.

The steps below is used to refresh a pivot table:

1. Click any cell in the pivot table.
2. Click on the **PivotTable Analyse** tab.
3. Click the **Refresh** or **Refresh All**.

If the source data changes, Excel will update the pivot table with the latest data. Always remember to refresh your pivotable to keep things up-to-date.
