# MODIFYING PIVOT TABLE CALCULATIONS

Modifying PivotTable calculations can be a valuable skill that enhances your data analysis capabilities. One of the easiest ways to do this is through the "**Value Field Settings**" dialog box.

To access the dialog box, right-click the value you want to modify in your PivotTable and select "**Value Field Settings**" from the drop-down menu.

Once you do this, a new window will appear, allowing you to modify the calculation type, add filters, and adjust other settings.
