VIEW FIELDS AND AREAS SIDE-BY-SIDE

Viewing your fields and areas side-by-side is often helpful when using Pivot table field settings. This means you can see all the available data fields and the areas where you can drag and drop them to create different pivot views.

Having both fields and areas visible simultaneously allows you to quickly and easily drag and drop fields into different areas to create new pivot views.

For example, I could drag the "**product**" field into the "column" area to see a breakdown of sales by product or drag the "**date**" field into the "**row**" area to see how sales vary over time.

To view fields and areas side-by-side in a pivotable, click on the Settings icon and select **Fields Section and Areas Section Side-By-Side**.
