PROTECTING EXCEL WORKSHEETS AND WORKBOOKS

Protecting your workbooks, worksheets, and cells is crucial to maintaining the integrity of your spreadsheet and reducing errors. Imagine spending a lot of time creating a complex spreadsheet that works well, is easy to update, and looks great. You share it with your team, but mistakes start creeping in. Formulas are accidentally edited or deleted, links are broken, and the formatting is ruined. This can frustrate you as the creator and create unnecessary work as you have to go back and fix these errors. However, you can prevent this by taking simple steps to protect your worksheet and data.
