PROTECTING THE STRUCTURE OF A WORKBOOK

Protecting the structure of a workbook is vital to prevent accidental or intentional changes that could harm the integrity of the data. This is especially important when multiple users are working on the same workbook, as changes made by one person can affect the work of others.

The Read-only access allows anyone who has access to your workbook to view the workbook but does not stop them from going further to make changes because they can still override the read-only settings. This is possible when opening the workbook by clicking on the **No** button.

I don’t recommend using the read-only method for workbooks containing confidential data.

Protecting the workbook's structure means preventing someone else from deleting the worksheet, moving the worksheet, renaming a worksheet, and inserting a worksheet.

Follow the steps below to achieve this result:

1. Click on the File tab on the ribbon.
2. Click on **Info.**
3. Click on the **Protect Workbook** drop-down menu arrow.
