CREATING A MACRO IN EXCEL

You can easily create a macro by recording your keystrokes and mouse clicks. Once done, you must assign the macro a name and choose where to store it. Then, you can run the macro anytime you want using an Excel command.

Let's say you must repeatedly gather specific results each time they need to be in the same format. For example, using the table below, you don't have to create the table from scratch every time. You can use a macro to do it for you automatically.

	A	B	C	D	E
1					
2		WEEKLY SALES REPORT			
3		S. No.	Day	Amount	
4		1	Monday		
5		2	Tuesday		
6		3	Wednesday		
7		4	Thursday		
8		5	Friday		
9		6	Saturday		
10
