KEYBOARD NAVIGATION WITHIN A WORKSHEET

When using your mouse to input data, clicking on each cell to move across rows and columns can become cumbersome, especially when working with large amounts of data in a worksheet.

Generally, when navigating within a worksheet, you move either one step in one of the four directions or continue in the same direction. After moving away from an active cell, you do not necessarily have to use the mouse continuously to move in any other direction.

Use the keyboard key(s) as illustrated below for every one-step movement from the active cell.
