AUTOFILL SEQUENCE DATA ENTRY

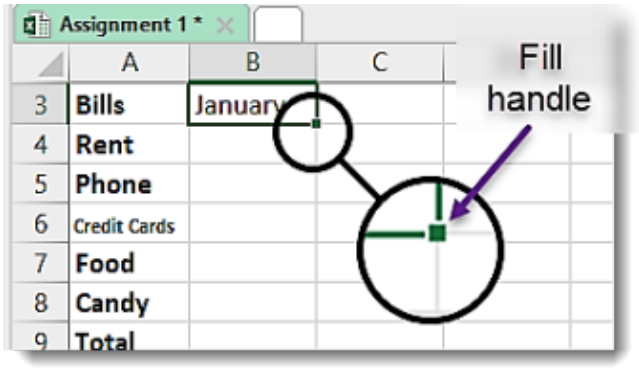

AutoFill is a feature in Excel that allows you to quickly fill a range of blank cells with a series of values or a formula at the click of a button.

The process of using AutoFill is pretty straightforward. All you have to do is ensure the cell or range of cells where you wish to fill the data is ready.

Type the value or formula you wish to use as the starting point for the series, so as illustrated below; the starting value is in cell **B3**.

Next, you drag the fill handle (in the bottom-right corner of the selected cell or range) to the cells you wish to fill.

Upon dragging and pulling the fill handle **towards your right**, a preview of the filled cells will be displayed.
