

4. Excel will automatically detect the range you selected and the *Create Table* menu will appear.
5. If the data range has column headers, make sure the *My table* has headers option is selected.

6. On the *Home tab*, in the *Styles* group, or under *Table*, select *Format* as *Table* and choose one of the predefined table styles.

7. Choose a table style from the list of available options or click *More Tables* to display more styles. Finally, click "*OK*" to create the table.

Once the table is created, you can start using Excel's built-in functions tailored for tables. For instance, you can sort data by clicking on column headers, filter data through column drop-down menus, or employ formulas that reference the table.

Moreover, the table can be customized by adjusting the style, adding or
