7. You can further filter the data based on other columns. To remove filters, click the *Clear* button in the *Sort & Filter* group.

NOTE: more advanced filtering options can be used, including sorting the filtered data, applying multiple filters to different columns, or creating custom filters based on your criteria.

These options are accessible in the *Filter* dialogue box, which can be opened by clicking the Filter button in the *Sort & Filter* group and selecting the *Filter*... option from the drop-down menu.

SORTING & FILTERING TOOL

Excel's *Sort & Filter* tool is a powerful combination of sorting and filtering functionalities within a worksheet.

To access this tool, you must select the *Edit* group on the *Home* tab of the ribbon bar. The *Sort & Filter* tool includes several features, including:

- **Sort**
  This feature allows you to sort the data in a worksheet by one or more columns. Data can be sorted ascending or descending, and you can also sort by multiple columns simultaneously.
- **Filter**
  This feature is useful for filtering data in a worksheet based on specific criteria. You can filter data by text, numbers, dates and other criteria. Additionally, you can apply multiple filters to different columns to further narrow the data.
- **Clear**
  This feature enables you to remove any sorting or filtering applied to the worksheet.
- **Advanced**
  This feature enables you to apply more advanced sorting and filtering options. For instance, within this section, you can sort data by colour or icon, or filter data based on a custom formula.
