CONDITIONAL FORMATTING

	A	B	C	D
1	PRODUCT	JAN	FEB	MAR
2	Lemons	2.42100 €	3.43200 €	2.92650 €
3	Apples	0.32100 €	0.20500 €	0.26300 €
4	Peaches	3.34300 €	0.88900 €	2.11600 €

In Excel, conditional formatting refers to the feature that enables cells in a worksheet to be formatted based on specific criteria. For instance, it allows cells to be visually highlighted if they meet certain conditions, such as having a particular value or exceeding a specified threshold.

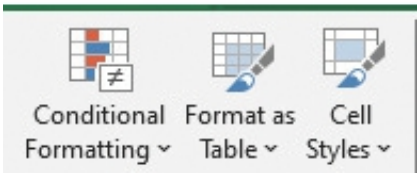

Conditional formatting is useful for quick and easy data analysis and for identifying recurring trends and patterns. Some of its most common applications include:

- Highlighting cells containing specific values or text strings;
- Identifying duplicate values within a range of cells.
- Applying colour scales to illustrate variations in numerical data.
- Highlighting cells that meet specific criteria, like being above or below a certain value or date.

USE CONDITIONAL FORMATTING

To use conditional formatting, simply follow these steps:

1. Highlight the range of cells where you want to apply conditional formatting.
2. Select the *Conditional Formatting* icon in the *Styles* group on the Home tab of the Ribbon.

3. Select the type of formatting you want to apply, for instance, *Highlight Cell Rules* or Color Scales. You may choose to create a custom rule based on specific criteria.
