

9. Stock Charts

This type of chart is usually employed to emphasize the price and volume of stocks over time. It often encompasses multiple data series and can be customized to display various types of stock data.

10. Surface Charts

The surface chart is used to show the relationship between three variables. In this case, a three-dimensional surface can be displayed in which the values of the three variables are represented.

11. Bubble Charts

This type of chart is similar to the scatter chart but incorporates a third variable, depicted by the size of the bubbles. It is frequently utilized to illustrate the relationship among three variables.
