

12. Doughnut Charts

This type is a variation of the pie chart where the centre part is removed, creating a ring shape. It's handy for displaying data with multiple categories.

13. Waterfall Charts

The waterfall chart is useful in scenarios where you aim to illustrate how an initial value is impacted by a sequence of positive or negative values, showcasing the changes in value over time.

This list provides a comprehensive range of charts that can be created in Excel. However, the selection of chart type should be based on the nature of the data being presented and the specific objectives of the chart. We will explore this further in the following sections.

A CHART FOR EACH GOAL

The choice of chart type depends on the nature of the data you have. Sometimes, it can be challenging to determine the most suitable chart for your needs. While some datasets may lend themselves well to multiple chart types, others may have a more straightforward choice.

In general, the types of charts and corresponding data can be divided into four categories:
