6. Use add-ons for data visualization

In addition to its basic functionality, Excel offers a plethora of options that can elevate data visualization. These tools empower users to create advanced charts and graphs like heat maps, tree maps, and network graphs, fostering deeper insights and analysis.

CREATE A CHART

To create a chart in Excel, follow these simple steps:

1. Highlight the cells containing the data you want to include in your chart. This selection should include both categories and values.
2. Select the Insert tab on the ribbon bar.
3. Select the type of chart you want to create from those in the *Charts* group. You can choose among Column, Line, Pie, Bar, Area, Scatter, and many other types.

4. Once you choose, Excel will automatically create the chart based on the selected data. The chart will be visible next to the reference data in the same worksheet.
