

6. Excel will now create a basic stacked column chart using the selected data. The chart can be customized by adding titles, labels, and formatting options using the *Chart Design* tab of the ribbon bar.
7. Alternatively, you can edit the chart by clicking on any chart element and selecting Format from the context menu. This allows you to regulate the colour, font, size, and other visual properties of the chart elements.
8. To add or remove one or more series from the chart, simply click on the chart and then on the *Select Data* button in the *Data* group of the *Chart Design* tab. This will allow you to change the data ranges and series names associated with the chart.

9. You can change the layout and style of the graph using the *Design* and *Layout* tabs on the *Graph Design* tab. These tabs provide additional options for customizing the appearance and behaviour of the chart.
10. When you are satisfied with the appearance of the chart, you can save it as a different file or insert it into a worksheet as an embedded object.
