6. To incorporate axis labels and a title for your chart, click on the chart and access the *Chart Design* tab found on the ribbon bar. Within this tab, you can tailor the appearance and formatting of the chart to your preferences. Furthermore, you can click the *Add Chart Element* button to insert axis titles, data labels, etc.
7. Once you finished customizing the bubble chart, you can save it as a separate Excel file or insert it into a report or bigger presentation.

WATERFALL CHART

The waterfall chart represents one of the most widely used types of charts for financial analysis as it illustrates how the initial value is impacted by different factors until reaching the final value. Its name stems from its resemblance to the shape of a waterfall.

To create a waterfall chart in Excel, follow these steps:

1. Enter the data in an Excel worksheet. The first column should contain the category names, and the second column should contain the values.
