A	B
A	**B**
Revenue	23.000
Costs	8.200
Gross Margin	14.800
Administrative Expenses	2.100
Net Receipt	12.700

2. The second column will contain the values that will be used to create the waterfall chart. For the first row of this column, simply enter the initial value. For the following rows, calculate the differences between the values and enter them as positive or negative numbers.
3. Select the data in the three columns and click the *Insert* tab. Finally, choose the *Waterfall* option from the chart menu.

4. Excel will now create a default waterfall chart. You can customize it by clicking on the chart and using the *Chart Design* and *Format* tabs.
5. If you want, you can add data to the chart by right-clicking on a data point and selecting *Add Chart Element*.
6. Once you achieved the desired outcome, save the chart by clicking *File* and choosing the *Save As* option.
