

3. Select the type of chart for each data series. For instance, pt for a column chart for one series and a line chart for another series. Click the OK button to create the chart.
4. Once you created the chart, you can customize it by adding or removing data series, changing the chart type for each series, formatting chart elements such as axis labels, title and legend, and so on.

RADAR CHART

The radar chart, also known a star chart, provides a visual representation of data where multiple variables are shown on a two-dimensional plane.

In Excel, this chart type is created by plotting data points along radial lines extending from the chart's centre. Each line represents a different variable, and the data points are connected to form a polygonal shape.

Radar charts are useful for comparing various datasets across multiple
