1. Enter your data in a tabular format, ensuring you have clear row and column headings.
2. Select the data range to be used in the heatmap chart. For instance, the data range B2:G7.

	JANUARY	FEBRUARY	MARCH	APRIL	MAY	JUNE
2015	6	8,2	10,6	14,7	17,8	23,7
2016	6,7	8,5	10,8	14,9	17,8	23,9
2017	6,9	8,7	11,2	15,1	18	24,5
2018	7	8,9	11,4	15,6	18,2	24,6
2019	7,1	9,3	11,7	15,7	18,4	24,7
2020	7,2	9,6	12	15,9	18,5	25,1

3. Select the *Home* tab found on the ribbon bar and select the *Conditional Formatting* item from the Styles section.
4. Select *Color Scales* from the drop-down menu and choose the colour scale you want to use for the heatmap chart. You can preview it by hovering over the colour scale with your mouse.

5. At this point Excel will automatically apply the colour scale to the selected data, creating a heatmap chart with conditional formatting. The result will then look like the image below.
