

This type of chart is a statistical tool commonly employed to analyse the distribution of a dataset. Specifically, the chart displays essential summary statistics, including the minimum and maximum values, the median, and the lower and upper quartiles of the data.

In this chart, the box symbolizes the interquartile range (IQR), delineating the span of values between the first and third quartiles. The horizontal line inside the box represents the median. Extending from the box are whiskers that reach out to the minimum and maximum values of the dataset.

These types of charts are commonly employed in statistical analysis due to their efficacy in pinpointing anomalies within the data. They prove especially valuable when comparing data across various groups or categories.

To create a box and whisker chart in Excel, follow these steps:

1. Select the data range you wish to visualize with the chart.
2. Select the Insert tab and select the *Insert Statistical Chart* option. Finally, choose the box and whisker chart type from the list of options.
3. Excel will now create a basic box and whisker chart. You can customize the chart by right-clicking on it and selecting *Format Chart Area*. From here you will be able to add labels to the axes, titles, and change the style of the chart. Additionallyn, you can edit chart elements by right-clicking on the chart and selecting *Add Chart*
