UNDERSTAND THE EXCEL INTERFACE

Excel 2024 has a user-friendly interface, especially if you're familiar with the previous version.

Mastering all the features within the software interface of Excel 2024 may take some time if you are new to Excel or if you have been using earlier versions. The main interface includes the following elements:

1. Ribbon Bar/Menu

The ribbon bar, which is located at the top of the program interface, organizes Excel's many features and tools.

To access a list of various actions and options, you can click on any item on the menu bar and select the drop-down menu. For instance, clicking on the Home item you will see different options like *cut*, *copy*, *paste*, *bold*, *italic*, and so on. Alternatively, the Insert menu item displays actions like tables, illustrations, recommended charts, maps, and more.

In general, the commands that make up the ribbon bar can be divided into three main categories:

- **Tabs:** the ribbon bar contains several groups of commands, including *Home*, *Insert*, *Page Layout*, *Formulas*, and *Data*.
- **Groups:** this is a list composed of groups that include related commands that can be displayed below the ribbon bar. Classic examples are the group of commands related to *Alignment* or the one related to Font format.
- **Commands:** finally, these elements represent the specific items that constitute each set of commands.

2. Quick access toolbar

The Quick Access Toolbar (QAT) is a customizable bar located above the ribbon bar. This feature provides quick access to commands and functions which are used most frequently.
