

4. Once the connection is complete, Excel will provide a preview of the data available in the external source. Click on *Import* to start the import process of the data.
5. With the external data now available in your worksheet, you can proceed to create a PivotTable or PivotChart using the same steps as you would with any other data source: select the data range of interest, click on the Insert tab, and select *PivotTable* or *PivotChart*. Follow the instructions to choose the external data source and add fields to the PivotTable or PivotChart.
6. You can customize PivotTable or PivotChart to suit your needs, using the various formatting and design options available in Excel.
7. If there are changes in the source of the external data, you can easily update the PivotTable or PivotChart by clicking the *Update* button on the ribbon bar. This will update PivotTable or PivotChart with the most recent data from the external source.

USE ANOTHER PIVOTTABLE AS THE DATA SOURCE

If you wish to use another PivotTable as the data source, follow these steps:

1. Create the first PivotTable by selecting the data range and clicking *PivotTable* on the *Insert* tab.
2. In the *Create PivotTable* menu, choose the location where you want to place the *PivotTable* and click *OK*.
3. Drag the fields you want to include in the PivotTable from the *PivotTable Fields* panel to the *Values*, *Columns*, and *Rows* areas.
4. To create the second PivotTable, repeat steps from 1 to 3.
5. Click on the cell within the worksheet where you want to insert the data for the second PivotTable.
